Competitor Map

Competitor	Classification	Reason
Strava	Direct	Records physical activities, tracks progress, and supports personal goals for fitness.
Everyday.app	Indirect	Focuses on maintaining habits and consistency rather than measuring recreational skill progress.
Skillshare	Indirect	Helps users learn new skills through course instead of tracking their activities.
Manual Tracking	Status Quo	Users depend on memory, videos, notes, or personal feedback

Comparison Table

Category	Strava	Skillshare	Everyday.app	Status Quo
Main Purpose	Fitness activity tracking.	Online courses for learning skills.	Habit tracking and consistency building	Informal progress tracking through their own habits and notes.
Strengths	Easy recording, statistics, community.	Course access is simple. Instructions are clear. Certificate. 1-1 Sessions. Public discussion feed.	Simple interface, daily habit streaks, color-coded grid visualization, highly flexible for any custom habit (tracking only).	No need for app, its more familiar to use.
Limitations	Only sports and fitness activities, payment for	Paid subscription to access the courses. No	Focuses only on daily completion/streak s rather than	Progress can be difficult to organize,

	goal tracking.	progress tracking thrughout the course.	measuring skill growth or technique improvement. Limited details per activity log. Heavily limited features in free version.	compare and review over time.
Progress Tracking	Statistics, streaks, graphs.	Minimal, the only progress tracking was project submission at the end of the course.	Streaks, daily board check-ins, consistency percentages, and color intensity gradients.	Track by memory, recordings, photos in gallery, feedback by sharing by messages or in person
Accomplishments	Badges by how many activities you have completed. Challenges and leaderboards	Certificates of completion are earned at the end of the course and achievements with badges.	Streak milestones, streak recovery features, and daily consistency streaks	Personal milestones, completed activities, and them analyzing their own session.
SkillUp Opportunity	Track qualitative progress and larger range of activities	Offer online courses as well, to encourage users to track their progress with SkillUp.	Visuals can be a good inspiration for some of our tracking systems.	Organize progress, activities, and accomplishments in a centralized platform

Strava Competitive Landscape

Competitor Type	Direct
Main Purpose	Fitness activity and performance tracking

Strengths	Easy recording, detailed activity history, measurable statistics, community.
Limitations	Strava focuses on measurable fitness statistics, such as time and distance. These measurements help track physical activities but does not directly track improvements in technique or skill. Also they have goal tracking within a paid subscription.
Progress Tracking	Weekly statistics, streaks, historical performance, and graphs for activities.
Accomplishments	Milestones badges for number of activities completed. There are also challenges you can complete. For different segments or routes there are leaderboards.
SkillUp opportunity	Allows users to track their skill development through personal goals, past accomplishments, recordings, and feedback in addition to numerical statisitcs. SkillUp can also expand the range of recreational activities where Strava is limited.
Ranked Switching Triggers	1. Users may need to see improvements through completed accomplishments, comparison with past activities, recordings, and feedback instead of only using numerical statistics. 2. Users may want to track progress across different hobbies and recreational activities that are not part of Strava's current options. 3. Users may need a free alternative to track their goals.

SkillShare Competitive Landscape

Competitor Type	Indirect
Main Purpose	Online courses for learning skills.
Strengths	Course access simple and navigation. The instructions are clear. Certificates can be earned after course completion. 1-1 sessions can be purchased for personalized experience. Dicussion tab in course and in general for community discussions. Learning path for deepening skillsets with a set of courses together.
Limitations	Paid subscription to access the courses and partake in discussions. The website does not allow any courses being taken while in the free tier and doesn't allow posting and viewing other posts.

Progress Tracking	No progress tracking for each individual course relies on the user to track their own progress. Closest it gets is submitting a project near the end of the course.
Accomplishments	Badges earned for completing milestones such as taking a number of courses, submitting a number of projects, or starting a discussion. General accomplishments, nothing course specific.
SkillUp opportunity	Allows users to track their skill development through personal goals, past accomplishments, recordings, and feedback in addition to numerical statistics. SkillUp can also allow use of the app in a free account and with more deatiled analysis/features with a paid subscription, where SkillShare requires a subscription before anything. In addition, gives potential users of SkillShare a way to track their progress while taking courses.
Ranked Switching Triggers	1. **Paywall frustratio**n: SkillShare users who hit a paywall will or on a free tier will not be able to do anything. While SkillUp does allow usage of the app in the free tier. 2. **No Progress Tracking or growth**: During or Finishing a course doesn't show whether the learner's skill has improved. Skill Up's recordings, feedback and past accomplishments let users compare their work over their journey. 3. **Using it alongside Skillshare**: SkillUp doesn't have to replace Skillshare. Users can track their progress in SkillUp while taking Skillshare courses, which makes it an easy first step that can lead to using SkillUp more over time.

Everyday Competitive Landscape

Competitor Type	Indirect
Main Purpose	Daily habit tracking and consistency management.
Strengths	Clean and simple interface, daily streak counters, visual color-coded boards, and easy habit logging across devices.
Limitations	Everyday.app focuses purely on binary habit completion (did you do it or not?) and streak maintenance. It does not allow users to track actual skill development, upload media/recordings to analyze technique, or receive feedback on performance.

Progress Tracking	Daily streak counters, visual calendar heatmaps, habit completion percentages, and historical consistency grids.
Accomplishments	Milestone badges for maintaining daily streaks (e.g., 7-day, 30-day, 100-day streaks).
SkillUp opportunity	Allows users to track qualitative skill development, upload performance recordings, and analyze technique over time rather than just counting daily habit streaks. SkillUp fills the gap for users who want to know how much better they are getting at a recreational activity, not just how often they do it.
Ranked Switching Triggers	1. Focus on Skill Growth vs. Streaks: Users realize that maintaining a daily streak does not mean their skills or techniques are actually improving. SkillUp allows them to track real progress through media uploads, journal entries, and side-by-side performance comparisons. 2. Lack of Detailed Activity Logs: Everyday.app only offers basic daily check-ins. Users looking to store media, detailed session notes, or qualitative feedback will switch to SkillUp for a centralized tracking hub. 3. Non-Daily Recreational Hobbies: Many recreational skills (like golf, boxing, or jewelry making) are practiced weekly or periodically rather than daily, making streak-based habit trackers frustrating or unmotivated when a streak breaks. SkillUp caters to flexible, non-linear hobby progression.
